

SKILLS

Design: Figma, UX research & playtesting, interaction & visual design, accessibility design, prototyping

Technical familiarity: Unity (UI Toolkit), Unreal Engine (UMG), C#, Python, Git

GAMES

Isabel

10/2025 - Present

UI Programmer

- Redesigned and engineered the HUD for a procedurally generated 2D roguelite, **replacing a cluttered, inherited prototype UI** with a cohesive system built in collaboration with the team's UX designer.
- Designed an animated, **shader-driven** stage-progression meter, including a custom pixelation pass to reconcile fluid VFX with the game's pixel-art style, making player progress immediately legible.
- Ran **iterative playtesting** to surface **usability pain points**, then designed and implemented targeted UI solutions.

Speed Golf Cart

2/2026 - Present

Solo Project

- Led end-to-end game design** — concept, visual design, and core interaction systems for a 3rd-person multiplayer party game, balancing usability with a distinct aesthetic.
- Integrated **AI tooling** (Claude Code) into the design-to-development workflow to accelerate iteration speed directly relevant to the role's interest in AI-augmented workflows.

Project: Ether

8/2023 - 4/2024

Capstone Project - UI Programmer

- Designed and iterated on **accessibility features** (subtitles, colorblind modes, aim assist) through multiple rounds of testing and refinement, improving usability for players with diverse needs.
- Owned end-to-end design of all menu and HUD flows, from low-fidelity wireframes through final visual design.

WORK EXPERIENCE

Data Labeling Analyst II

10/2025 - Present

Tundra Technical Solutions - on assignment at Meta

- Analyzed labeling quality data to identify trends and inform process and policy improvements, partnering with cross-functional teams and global vendors to align on standards.

Code Coach

5/2025 - 10/2025

The Coder School

- Created custom lesson plans** on a student-by-student basis for use in 1:1 tutoring sessions, **based on students' skills, background, and interests** to help students to create games they're passionate about.

Game Programming Intern

6/2023 - 8/2023

SAIC - Controlled Unclassified Information Project

- Designed each player's UI within an asymmetric wargame, translating complex, **real-time MATLAB simulation** data into clear, actionable interfaces for distinct player roles.
- Collaborated with a small cross-functional team** of developers and engineers to scope and deliver functional, **easy-to-understand designs** under a compressed timeline.

EDUCATION

B.S. in Game Design and Interactive Media (bit.ly/UCIGDIM10)

9/2020 - 6/2024

University of California, Irvine
